

Signal — Complete Feature Guide for Partner Explanation Calls

Audience: You (walking GPs / principals / associates through Signal)

Goal: Explain every module by *job to be done*, not by UI novelty

Companion docs: [DEMO_SCRIPT.md](#) (timed walkthrough) · [PRODUCT.md](#) · [PARTNER_CONVICTION_BRIEF.md](#)

How to use this on the call

Time	Do this
First 60s	Hook + one idea (Coverage vs Judgment)
Next 8–10 min	Walk Monday path modules only (Sections A–B)
If they lean in	Add Judgment, Competitors, Diligence (Section C)
If LP in the room	LP Desk (Section D)
Only if asked	Labs — Edge / AI OS (Section E)
Close	Honest boundary + “databases plug in as connectors”

Rule: Never tour every screen. Partners remember *one ritual* and *one Pass*.

Default path: Desk → Meeting → Excel → one company brief → Chat or Search → Digest.

Opening (memorize)

Partners don’t need another Crunchbase. They need an associate that never sleeps — and never wastes Monday morning.

Most tools optimize for **coverage**. Thirdbase doesn’t have a coverage problem — it has an **attention allocation** problem. Signal spends partner attention like capital: concentrated, thesis-aligned, and explainable.

One-liner: Always-on deal intelligence OS that turns market noise into a self-maintaining pipeline, ranked the way Thirdbase actually invests.

Mental model (draw this once)

```
Market noise (funding, peers, news, commentary) ■ ▼ Thesis policy (config, not a prompt) ■  
▼ Score → Relative rank → Deep Dive / Watch / Pass ■ ████████████████████████████ ▼ ▼ ▼  
Excel Digest Partner OS (web) ■ ■ ■ ████████████████████████████ Monday ritual
```

Recommendations:

Rec	Meaning for partners
Deep Dive	Worth IC-grade attention this cycle
Watch	Interesting; not yet outstanding vs cohort
Pass	Explicit no — with spine (show one on purpose)

Scores are **relative within theme × stage** (“#2 of 7 AI infra Series A”), not fake absolute precision.

Thesis encoded in config (config/thesis_policy.yaml):

- 60% dominant tech/growth · 40% tactical
- 40%+ YoY at growth stage · ~3yr runway · 3–4 Tier-1 preferred
- Moat / TAM > \$1B · 3–5yr exit · attractive entry vs comps

A. Core engine (invisible — explain once)

These are not pages. They are why the pages mean something.

A1. Ingest + dedupe + refresh

What
public
signals
(EDGAR
/
HN
/
RSS
/
arXiv),
dedupes
companies,
re-scores,
rewrites
Excel
+
DB

	Partners use pipeline maintains itself. Partners review; they don't data-enter."
	When Header Refresh . python scripts/refresh.py
	Say Ingest → dedupe → score against thesis → Excel rewrite. Live connectors plug in later; judgment layer is already here."

A2. Thesis scoring + why_now

	What Weighted dimensions: thesis fit, team, cap table, traction, moat, valuation, runway, TAM/exit, timing
--	---

		Pattern
		us score
		is
		explainable;
		overrides
		become
		policy
		fuel
		Where
		company
		page
		score
		bars
		.
		Excel
		Pipeline
		columns
		.
		Chat
		Say
		Thesis
		is
		version-controlled
		config
		—
		not
		a
		system
		prompt
		that
		drifts.”

A3. Alerts

		What
		mediate
		flags:
		2+
		Tier-1
		on
		a
		name,
		off-thesis
		peer
		moves,
		watched-founder
		/
		GP
		watchlist
		hits

Do not	wait
for	Wednesday
digest	when
something	is
time-sensitive	
Desk	sidebar
Meeting	agenda
Digest	
Say	Selectivity
on	email;
urgency	on
alerts."	

B. Monday path (default explanation order)

These five are the product. Everything else is depth.

B1. Desk — /

Module job: Answer “What deserves my hour *today*?” in one screen.

Element	Use
Hot Deals (top 5)	Highest-conviction names — Deep Dive / high score
60/40 mix gauge	Are we overweight tactical vs policy?
High-severity alerts	What can't wait for the digest
Sectors + worth reading	Light context, not a second dashboard
Open Monday agenda	One click into Meeting OS
Download Excel	Shared debate object

Partner use: Morning open. Not a feature directory.
What to say:

“This is the attention surface. Five deals. Not fifty. If Hot Deals is long, Signal failed.”

Click: Open Monday agenda → Meeting.

B2. Partner Meeting OS — /meeting

Module job: Auto-build a ~90-minute Monday partner agenda so the meeting has a spine.

Pulls from	Why it's on the agenda
Hot Deals	Debate candidates
IC trails	Deals already in motion
Alerts	Time-sensitive
Peer shifts	Competitive pressure
Mix drift	Portfolio posture
Stale queue	Memory / cleanup decisions

Partner use: Facilitator opens this instead of a blank Google Doc.
What to say:

“Associates shouldn’t rebuild the Monday doc from Slack. Signal assembles the agenda from the same store as Excel and digest.”

Click: Pick one Hot Deal → company page (or stay and export agenda if shown).

B3. Excel workbook — Thirdbase_Deal_Pipeline.xlsx

Module job: System of record for partner *debate* (not for looking pretty).

Tab	Use
Pipeline	Full scored book: why_now, thesis_score, relative_rank, Rec
Hot Deals	Last ~30 days, high conviction only
Watchlist	Parked but alive
Sector of Tomorrow	Emerging / contrarian subsectors

Peer Set Activity	What peer firms are doing
Co-investor Heatmap	Who co-invests with whom
Golden Insights	Proprietary windows, crowding, white space, call lists
Peer Firm Dossiers	Firm-level battle cards
Judgment OS	Overrides, misses, founder radar, digest A/B
News Worth Reading	Curated + why Thirdbase cares
Investor Commentary	Operator / GP chatter
Stale	≥90 days quiet — partner review, never auto-delete

Partner use: Second screen in IC / partner meeting; SharePoint later.

What to say:

“Excel is intentional. Partners already debate in sheets. We regenerate the shared object of argument — we don’t fight culture.”

Click: Download Excel from Desk (or open from [data/output/](#)).

B4. Pipeline — [/pipeline](#)

Module job: Filterable table of the whole scored book when Hot Deals isn’t enough.

Partner use: “Show me all Watch in defence” / sort by score / find a Pass.

What to say:

“Desk is for attention. Pipeline is for search and debate prep.”

B5. Company brief — [/company/\[id\]](#)

Module job: IC-style one-pager for a single name.

Block	Use
Rec + thesis score + relative rank	Decision posture
Why now	Articulated founder / market / investors / traction / valuation
Cap table T1/T2/T3	Quality of syndicate

Score breakdown bars	Explainability
Commentary	Qualitative signal
Comps / circling peers	Competitive context
Override panel	Partner disagrees → Judgment fuel
Diligence Stress Pack	Bear case, work orders, meeting prep, deck flags
IC packet export	Copy/download markdown for IC

Partner use: Before a call, before IC, when someone asks “why this score?”

What to say:

“Coverage tools summarize. We argue against ourselves before IC.”

Diligence Stress Pack (on the company page)

Sub-module	Partner use
Bull vs Bear	Kill arguments + fair counters
Diligence plan	Work orders with close conditions
Founder-only email draft	Copyable; never auto-send
Meeting prep	Pre-call landmines from bear case
Deck flags	Paste deck text → claims vs blanks + red flags
IC packet	Packet includes bear + required work orders

B6. Search / research agent — /search

Module job: Type any company → brief. Honesty split matters.

Input	Output	Partner use
Name in pipeline	Full IC-grade brief (high confidence)	Fast path to company truth
Name outside pipeline	Scout brief — Watch-capped, est . score, banner “not IC-ready”	Rough look without fake conviction

What to say:

“Coverage tools fake IC readiness on Wikipedia. We separate scout from conviction. Deep Dive is earned inside the maintained pipeline.”

Demo: AgentGate (pipeline) → then an external name → show scout banner.

B7. Partner chat + — /chat

Module job: Ask in English over the *same* store as Excel / Desk.

Works well	Does not
Monday agenda, top Deep Dives, 60/40, sectors, bear case, peers, judgment	Ungrounded trivia — refuses with starters

Partner use: Lazy query path for GPs who won't open five tabs.

What to say:

“Grounded answers or a refusal. We don't hallucinate a briefing from thin air.”

Starter prompts to demo:

1. Monday partner agenda
2. Three AI infra sub-sectors nobody is talking about
3. Summarize commentary on [Deep Dive]
4. Are we overweight tactical vs 60/40?
5. Bear case for [Deep Dive]

B8. Digest — /digest

Module job: M/W/F email preview — hard-capped selectivity.

Cap	Content
3–5	Deals only (not the whole book)
1–2	Sector calls
3–5	News worth reading
Few	Peer moves

Partner use: The ritual that lands in inbox without chasing. Preview in UI; production send via SMTP.

What to say:

"If they won't forward it, we failed. Expanding to eight deals is coverage creep — we refuse it as default."

B9. Library — /library

Module job: Excel "reading room" tabs as UI.

Tab	Use
News Worth Reading	Curated + Thirdbase why
Investor Commentary	Qualitative signal with source
Watchlist	Parked names
Stale (90d+)	Partner actions: Keep / Archive / Request refresh — never auto-delete

What to say:

"Stale is a decision, not a garbage collector. Institutional memory stays until a partner says otherwise."

C. Partner depth (show if they lean in)

C1. GP Desk — /gp

Module job: Partner cockpit — attention queue, KPIs, analytics, IC pressure, competitive pulse, exportable GP brief.

Partner use: When Desk isn't enough and someone wants "how is the book and process health?"

What to say:

"Desk answers today. GP Desk answers 'are we operating like a firm?'"

Don't open this as the first screen — it looks like a dashboard tour.

C2. IC Decision Trail — /ic

Module job: Governance object LPs ask for and GPs forget to keep.

Tracks	Use
Stages	Sourced → Screened → Deep Dive → Diligence → Partner meeting → IC vote → Term sheet / Pass / Watch

Diligence checklist	Team, product, market, traction, refs, legal, terms
Votes + event log	Paper trail
Documented Passes	Spine — we can say no

Partner use: Before IC; when LP asks “show me a decision trail.”

What to say:

“Process without theater. A Pass with a note is a feature.”

C3. Judgment OS — /judgment

Module job: The X-factor — hard to copy. Turns partner disagreement into firm learning.

Sub-module	Partner use
Override ledger	Disagree with Signal; reason tagged to a scoring dimension
Policy fuel	Raise/lower bars by dimension (not silent fine-tunes)
Miss retrospective	Blameless postmortem when FOMO arrived after we stayed cool
Mix drift alarm	Soft (± 6) / hard (± 12) bands vs 60/40
Evidence freshness SLA	Stale fields → confidence haircut
Founder radar	Watched operators / stealth newcos — don't wait for Wednesday
Digest selectivity preview	3 vs 5 vs 8 caps (avg score preview — not measured outcome precision yet)

What to say:

“Chatbots get smarter by accident. We get smarter when partners disagree in public and we change policy on purpose.”

C4. Competitors / Peer intelligence — /peers • /peers/[slug]

Module job: Competitive awareness — not voyeurism.

Capability	Partner use
------------	-------------

Firm radar / dossiers	How a peer wins, weak spots, when to call vs compete
Thesis-drift	Off-stated-focus bets (e.g. peer drifts into your lane)
Investor × company matrix	Who's on which caps
Co-investor heatmap	Syndicate unlocks
Golden insights	Proprietary quiet windows, crowding alerts, white space vs flood
Circling competitors on company briefs	Race risk on Deep Dives

What to say:

“Peer OS is alpha-adjacent: syndicate mapping, crowding risk, and white space — not gossip.”

Chat demos: “Who’s quietly investing in robotics?” · “What should I do Monday?” · firm name thesis shift.

C5. Sector of Tomorrow — /sectors

Module job: Emerging + contrarian subsectors with evidence (not “AI is hot”).

Partner use: Theme discovery before consensus; feed into digest sector calls.

What to say:

“Contrarian *and* evidenced — GP chatter, hiring, research velocity, fund formation. Chat can filter to AI infra sub-sectors nobody is talking about.”

D. External narrative — /lp

LP Process Desk

Module job: Story LPs diligence: how AI sits *inside* the investment process — not a science fair.

Shows	Why LPs care
Pipeline analytics + thesis adherence	Process discipline
IC governance samples	Paper trail
Selectivity / controls	Risk of model theater
Value-add narrative	How Signal changes partner time
One-pager export	LP meeting leave-behind

What to say:

“LPs don’t buy chatbots. They buy a firm that can show decision process, Pass spine, and controls on hallucination.”

E. Labs (only if asked) — More → Labs

These are powerful demos. They are **not** the Monday default. Say that out loud.

E1. Partner Edge — /edge

Sub-module	Use
Anti-consensus radar	Proprietary quiet tape vs consensus traps (peer FOMO > thesis)
Conviction clocks	FOMO vs patience- α → act / race / patience / cool-off
Partner twin	Judgment DNA from overrides → lean-in / push-back / hard-pass
Reference-call factory	Scripts from weak score dims + bear landmines (never auto-send)
Thesis what-if	Reweight dims → who enters/exits Deep Dive
Pass autopsy	Passes with peer/Tier-1 tension worth reopening
Velocity board	Accelerating names (signal × hiring × commentary)
Pre-mortem	“Assume we invested and lost” failure modes for IC

What to say:

“Coverage tools amplify FOMO. Edge separates proprietary windows from peer-bait — and forces pre-mortems before IC romance.”

E2. Signal AI OS — /os

Sub-module	Use
Agent fleet status	Operating view of specialized agents
Multi-agent war rooms	Contested scores / committee-style debate

Alpha signal feed	High-signal events surface
pwMOIC / conviction sims	Scenario pressure
Thesis autopilot + lookalikes	Theme expansion from winners

What to say (honest):

“This is the agentic operating layer. The production habit is still Desk + Digest + Excel. Labs show where the architecture goes — we don’t pretend the fleet replaces partner judgment.”

F. Cross-cutting features (mention when relevant)

Feature	Where	Partner use
Command palette ■K / Ctrl+K	Global	Ask without leaving page
Theme toggle	Header	Personal preference
Refresh pipeline	Header	Re-ingest + re-score + Excel
Workbook download	Desk · /api/workbook	Debate surface
Relative rank	Everywhere scored	Cohort debate, not fake precision
Provenance / confidence	Briefs · research	Estimated vs reported; scout vs IC
Human-in-the-loop	Stale · emails · overrides	Never auto-delete, never auto-send founder mail
Watchlists	<code>config/watchlists.yaml</code>	GP people + peer firms

G. Recommended 12-minute explanation flow

Min	Module	One line
0–1	Hook	Coverage vs Judgment
1–2	Desk /	Five Hot Deals + Monday CTA
2–3	Meeting /meeting	Auto 90m agenda
3–4	Excel download	Debate in sheets
4–5	One Pass	Selectivity is the product

5–6	Company + Diligence	Bear case before IC
6–7	Search scout honesty	Scout ≠ IC
7–9	Chat (2–3 prompts)	Grounded or refuse
9–10	Digest + Stale	Ritual + partner review
10–11	Optional: Judgment or Peers	X-factor or competitive edge
11–12	Close	Judgment first; connectors later

Close line:

We built the judgment layer and Monday ritual first. PitchBook and Crunchbase plug in as connectors. If partners won't open the digest without being chased — we failed.

H. Honest boundaries (say these before they ask)

Shipped as judgment / ritual	Phase 2 / purchase order
Thesis score, relative rank, Pass spine	PitchBook / Crunchbase / Harmonic / Dealroom
Excel + digest selectivity + alerts	Production SMTP/SendGrid to partner inboxes
Peer OS, Judgment, Diligence, Meeting	Coresignal hiring graphs, Affinity writeback
Scout research (Wiki/DDG/HN ± Claude)	Continuous cloud workers, SharePoint live workbook
Public EDGAR / HN / RSS / arXiv	Authenticated X / Blind / LinkedIn without vendors

Interview / partner line:

Databases are connectors. Attention allocation is the product.

I. Quick reference — every surface

Route	Module	Primary user job
/	Desk	What deserves my hour today
/meeting	Partner Meeting OS	Run Monday with a spine
/pipeline	Pipeline table	Filter/sort the full book

/search	Research agent	Brief any company (scout vs IC)
/chat	Partner chat	Ask grounded questions
/company/[id]	Company + Diligence + IC packet	Prep call / IC
/digest	Digest preview	M/W/F selectivity ritual
/library	Library + Stale actions	Reads, watch, partner cleanup
/gp	GP Desk	Operating cockpit
/ic	IC Decision Trail	Governance paper trail
/judgment	Judgment OS	Learn from overrides & misses
/peers	Competitor intel	Crowding, syndicate, drift
/peers/[slug]	Firm dossier	Battle card for one peer
/sectors	Sector of Tomorrow	Emerging / contrarian themes
/lp	LP Process Desk	LP diligence narrative
/edge	Partner Edge (Labs)	Anti-consensus & conviction tools
/os	AI OS (Labs)	Agent fleet / war rooms
Excel	Workbook	Shared object of argument

J. Cheat sheet — questions partners ask → where to go

They say...	Open...
"What should I look at Monday?"	Desk → Meeting
"Why is this a Deep Dive?"	Company brief + score bars
"Argue the other side."	Diligence Stress Pack
"Are we off 60/40?"	Desk mix · Chat · Judgment mix drift
"What are peers doing?"	/peers · firm dossier
"What's emerging before consensus?"	/sectors · Chat AI infra prompt
"Show me process for LPs."	/lp · /ic

"We disagree with the model."	Override on company · /judgment
"Is this name even real / funded?"	/search (watch for scout banner)
"Where do we debate?"	Excel download

Print / share: This file · [DEMO_SCRIPT.md](#) for timed beats · Excel on second screen if possible.
