

Agentic VC Competitive Landscape

Research note for Signal (Thirdbase). Catalog of AI-native funds and agentic VC platforms, their features/use cases, and how Signal should respond.

Verdict: The market splits into (1) AI-native funds that market themselves as agent-run, and (2) agentic platforms that sell the OS funds run on. Signal already owns the **judgment / attention-allocation** wedge. Highest-leverage gaps to close: diligence stress-testing, deck→memo with citations, meeting prep — not LP portals or fund accounting.

A. AI-native / agent-operated funds

Quadro VC — quadro.vc

- Deal flow agents scanning networks, signals, niche communities
- Investment intelligence: market signals, scenario modeling, high-conviction surfacing
- Fund ops agents: schedules, repetitive tasks, capital deployment speed
- Portfolio support agents: GTM / product / recruiting playbooks for founders

Cybertronic Ventures — vc.cybertronic.com

- Fully AI-executive firm (CEO/CMO/CLO as agents; human board oversight)
- End-to-end autonomous: sourcing → diligence → terms → portfolio monitoring
- Thesis: AI infra, autonomy, deep tech; seed / Series A

AI Native Capital — ainative.capital

- Multi-agent committee: sourcing, diligence, portfolio
- Scouts on 10k+ daily signals (GitHub, patents, hiring, sentiment)
- Diligence in hours; AI term sheets / legal workflows
- Post-invest ops: talent match, customer intros, pivot analysis
- Human partners = governance only

Moonfire (bionic VC pattern)

- In-house ML/LLM pipelines across sourcing, screening, evaluation
 - Human + quant blend; speed/scale positioning
-

B. Full-lifecycle agent platforms

Meridia — meridia.cloud — “4 analyst jobs, 24/7”

Job	Features / use cases
Sourcing	Continuous scan: Crunchbase, YC, GitHub, Product Hunt, TechCrunch, LinkedIn
Screening	Thesis as live filter (stage/sector/geo/check); AI score + summary
Memos	9-section IC memo in ~3 min; PDF + source attribution
Portfolio	Hiring/revenue/competitive threats; MOIC/IRR; multi-fund

Auryn — auryn.vc — most complete deal→LP chain

Module	Features / use cases
Dealflow	Outbound scout autopilot; Scout Inbox inbound triage; public apply form; thesis screen + background checks
Analysis	Deck→structured fields (never invent blanks); multi-judge contested scores; gap→founder questions only; probability-weighted MOIC exit buckets; diligence work orders with close conditions; bear-case memo; Word export
Portfolio	Founder KPI portal; runway alerts; cap table from transaction facts; fair value / TVPI / IRR
Fund/LP	Commitments, capital calls, distributions, PCAP statements

VCOS — vcosai.com — Flow / Clarity / Pulse / Vista

Module	Features / use cases
Flow	Thesis score inbound decks; Slack ping + calendar for hot; auto kind-no for cold; warm-path memory resurface; “lookalike” outbound from a deal you wish you’d seen
Clarity	Memo in fund voice/template; red flags with confidence; citations to slide/transcript/row; call→memo live synthesis
Pulse	One email for founder updates; human-confirm before ledger; append-only KPI time series; Monday brief (runway/burn/silent)
Vista	Live MOIC/IRR/TVPI; 1-click LP letter PDF; LP portal

Decile Hub / VC Lab — govclab.com

- Email deck in → extract CEO/metrics → thesis score (1–5★) → queue
- Outbound: LinkedIn network scan → warm paths → draft outreach
- Diligence memo + **counterfactual agent that argues against the deal**
- LP discovery, pitch-rehearsal simulator, cadence follow-ups
- Portfolio anomaly flags + drafted founder check-ins
- Quarterly LP report agent; chat agents via Telegram/WhatsApp/iMessage

Kruncher — kruncher.ai

- 30+ specialized VC agents; up to **300 deal-score params**
 - Screen match/no-match before opening deck; polite decline trail
 - Unified knowledge layer (email, CRM, transcripts, Drive)
 - IC memos in fund template (Word/PPT/PDF) with citations
 - **Signal Feed**: ~450 signals (People / Liquidity / M&A / Business); route to right partner
 - Alpha Engine: universe heatmaps, fundraising timing, white-space
 - Overrides learn per-tenant (no cross-customer leak)
-

C. Point solutions / CRM agents

Harmonic Scout — harmonic.ai

- NL market maps; momentum eval; diligence reports
- Early company discovery (claimed 6–12 months ahead)
- Talent movement; warm intro via network sync
- Draft outreach; Chrome extension; API/MCP/warehouse

Affinity Ascend (Jul 2026)

- Meeting Prep (background brief before external meetings)
- Warm Intro (ranked paths + draft ask; never auto-send)
- Data Update (meeting notes → suggested CRM fields; approve-only)
- MCP skills into Claude/ChatGPT; Document Synthesis (decks) coming

SignalRank / Specter / Aviato

- Quantitative investor-behavior / engineering-velocity / collaboration-network signals for early discovery

Industry pattern (GoingVC 2026)

- Sourcing = signal velocity (GitHub, papers, lab exits, hiring)
- Diligence = multi-agent contradiction maps (internal consistency × external constraints × call sentiment)
- Portfolio = AI systems architecture for tiny teams
- LP = structured self-serve data, not static PDFs

Gap analysis vs Signal

Capability	Signal	Best-in-class elsewhere
Thesis scoring + relative rank	Strong	Meridia / Kruncher / Auryn
Selectivity digests + Excel	Strong (differentiator)	Rare
Peer / competitor OS	Strong (differentiator)	Weak elsewhere
Company research → IC brief	Strong	Meridia 9-section
Bear-case / counterfactual	Diligence Stress Pack	Decile counterfactual
Deck upload → memo + red flags + citations	Diligence Stress Pack	VCOS Clarity / Auryn / Kruncher
Diligence work orders / founder-only Qs	Diligence Stress Pack	Auryn Ask + Verify
Meeting prep brief	Diligence Stress Pack	Affinity Ascend
Warm intro paths	Out of scope (no CRM graph)	Affinity / Harmonic
Configurable signal feed	AI OS Alpha feed	Kruncher 450 signals
pwMOIC exit modeling	AI OS Conviction	Auryn
Contested multi-judge scores	AI OS War Room	Auryn multi-judge
Lookalike outbound	AI OS Autopilot	VCOS Flow
Agent fleet / OS narrative	AI OS Fleet	Quadro / AI Native Capital
Anti-consensus / FOMO clocks / twin / refs / what-if / pre-mortem	Partner Edge	Rare as a first-class OS
Portfolio KPI ledger / LP letters	Out of scope for sourcing role	VCOS Pulse/Vista

Signal response — Diligence Stress Pack + AI OS

Built into the partner UI (not a second CRM):

1. **BearCaseAgent** — Decile-style counterfactual on every brief
2. **DeckRedFlagAgent** — paste/upload deck → claims + red flags with citations (never invent blanks)
3. **DiligencePlanAgent** — Auryn-style work orders + founder-only question email draft
4. **MeetingPrepAgent** — Affinity Ascend-lite pre-call one-pager

Signal AI OS (/os)

5. **Agent fleet** — Scout, Thesis Filter, Bull/Bear Counsel, Market Timing, Risk, Diligence, Portfolio Pulse, LP Narrator
6. **War Room** — Auryn multi-judge contested scores with disagreement index + partner next move
7. **Alpha feed** — Kruncher-style routed signals (People / Liquidity / Hiring / Peer / Research / ...)
8. **Conviction** — probability-weighted MOIC exit buckets + sensitivity (never invents blank valuations as fact)
9. **Thesis autopilot + lookalikes** — VCOS Flow kind-no / Deep Dive screen + “deals you wish you’d seen”

Partner Edge (/edge)

10. **Anti-consensus radar** — proprietary quiet tape vs consensus traps
11. **Conviction clocks** — FOMO vs patience- α timing counsel
12. **Partner twin** — override DNA predicts lean-in / push-back
13. **Reference-call factory** — scripts from weak dims + bear landmines
14. **Thesis what-if** — live reweight → Deep Dive flips
15. **Pass autopsy · velocity · pre-mortem** — regret risk, accelerants, IC failure modes

Principles preserved: thesis as config, provenance + confidence, human-in-the-loop, Excel/digest remain system of record.
