

Signal — Requirements Coverage Matrix

Maps the Thirdbase Deal Sourcing & Discovery brief to what Signal ships today.

Area	Status	Where it lives
Thesis scoring (60/40, Tier-1, 40%+ YoY, runway, TAM, moat, valuation, exit)	Done	config/thesis_policy.yaml, src/scoring/
Relative rank within theme × stage	Done	apply_relative_ranks
Articulate why (founder / market / investors / traction / valuation)	Done	build_why_now, company briefs
Sector of Tomorrow (+ contrarian)	Done (seed + live evidence enrich)	seed sector_calls, /sectors, chat filters
News Worth Reading (3–5 + Thirdbase why)	Done	digest + Excel + /library?tab=news + live RSS curation
Investor / operator commentary	Done (seed; live X/Reddit/Blind = Phase 2)	seed commentary + /library?tab=commentary
Continuous sourcing + dedupe	MVP live	EDGAR / HN / RSS / arXiv + discovery.py auto-add
Paid deal DBs (PitchBook, CB, Harmonic, Dealroom)	Stubbed connectors	StubConnector — plug API keys when licensed
Hiring (Coresignal / LinkedIn)	Stubbed	connector placeholder; headcount fields scored when present
Peer set + heatmap + thesis shifts	Done	src/intelligence/peers.py, /peers
Company IC briefs Pass/Watch/Deep Dive	Done	/company/[id], /search
Self-maintaining pipeline (add/update/stale 90d, no auto-delete)	Done	refresh + mark_stale
Excel workbook (all brief tabs + Golden Insights)	Done	src/excel/, data/output/Thirdbase_Deal_Pipeline.x
M/W/F email digest	Done	src/digest/, scripts/scheduler.py (SMTP for delivery)

Immediate alerts (2+ T1, off-thesis, watched founder)	Done	<code>evaluate_alerts</code>
Conversational partner interface	Done	<code>/chat, ■K, Streamlit app.py</code>
GP watchlist (brief people list)	Done	<code>config/watchlists.yaml</code> (73 handles)
VC peer firms (brief firm list)	Done	<code>config/watchlists.yaml + web/src/lib/peerFirms.ts</code>
Themes / topics	Done	12 themes + subsectors in thesis policy

Honest boundary

Signal's **judgment OS** (score, rank, Excel ritual, digest selectivity, peer drift, grounded chat) is production-shaped.

Coverage connectors (paid databases, authenticated social, continuous hiring graphs) are stubs or thin public adapters by design — purchase orders, not product gaps in the attention layer.

Interview line

We built the judgment layer and partner workflow first. Databases plug in as connectors.
