

Signal — Interview Demo Script (10–12 minutes)

Practice out loud. Keep Hot Deals and digest **short**. Show one deliberate **Pass**. One Monday path: **Desk** → **Meeting** → **Excel**.

0. Setup (before they sit down)

- [] `python scripts/refresh.py` already run; Excel exists in `data/output/`
 - [] Next.js up: `cd web && npm run dev` → `http://localhost:3000`
 - [] Offline fallback ready if Wi-Fi dies (seed DB still answers chat)
 - [] Optional: Excel open on second screen / or use **Download Excel** on Desk
-

1. Hook (60s)

Partners don't need another Crunchbase. They need an associate that never sleeps — and never wastes Monday morning.

Signal turns noisy funding announcements into a self-maintaining pipeline scored the way Thirdbase invests: thesis fit, Tier-1 quality, growth, moat, valuation — ranked **relative** to peers in the same sector and stage.

Show PRODUCT one-liner slide if using a deck; otherwise go straight to **Desk** (/).

2. Monday path (90s)

1. **Desk** (/) — Hot Deals (5), high alerts, 60/40 mix. Click **Open Monday agenda**.
2. **Meeting** (/meeting) — ~90m partner agenda auto-built from Hot Deals, IC, alerts, stale.
3. **Download Excel** — `Thirdbase_Deal_Pipeline.xlsx` is the debate surface:
 - Pipeline · Hot Deals · Peer dossiers · Stale · Judgment OS
4. Show one **Pass** (e.g. TokenTide / PipelineCloud) — “Selectivity is the product.”

Line: “*Excel is intentional. Partners debate in sheets. The OS allocates attention.*”

Skip /edge and /os unless asked — they live under **More** → **Labs**.

3. Refresh loop (60s)

In the header, click **Refresh**.

Narrate: ingest (EDGAR / HN / RSS) → dedupe → re-score → Excel rewrite.
Call out any new signal or score movement. Download workbook again if needed.

4. Live chat (3 min) — ask these in order

1. “Monday partner agenda”
2. “What are three AI infrastructure sub-sectors nobody is talking about yet?”
3. “Summarize what people are saying about [pick a Deep Dive company].”
4. “Are we overweight tactical vs 60/40?”
5. Optional: “Bear case for [Deep Dive company].”

If Claude API key missing: grounded retrieval still answers from the store — say so transparently.
Ungrounded questions should **refuse with starters**, not dump random Deep Dives.

4b. Search honesty (45s)

/search → type a **pipeline** name (AgentGate) → full IC brief.

Then type an **external** name → show the **Scout brief — not IC-ready** banner. Recommendation capped at Watch. Score marked est.

“Coverage tools fake IC readiness. We separate scout from conviction.”

4c. Diligence Stress Pack (60s)

Open a **Deep Dive** company page. Scroll to **Diligence Stress Pack**:

1. **Bull vs Bear** — counterfactual kill arguments
 2. **Diligence plan** — work orders + founder-only email (never auto-send)
 3. **Copy IC packet**
-

5. Digest + Stale (60s)

- /digest — M/W/F preview (3–5 deals). Say: production sends email when SMTP is set.
 - /library?tab=stale — **Keep / Archive / Request refresh**. Never auto-delete.
-

6. Close (60s)

We built the judgment layer and Monday ritual first. Databases plug in as connectors.
If partners won't open the digest without being chased — we failed.

Optional stretch (only if time): Judgment OS, Competitors, LP Desk — not the core path.
